

Explore Dynamically Aggregated Text

This recipe uses the Googlizer Tool to generate Dynamically Aggregated Text and uses tools such as a frequency list and concordance to explore the results.

Ingredients

- An Aggregation Tool such as [TAPoR Googlizer](#)
- A Concordance tool such as the [TAPoR Find Words - Concordance Tool](#)
- A List Words tool such as the [TAPoR List Words Tool](#)

Recipe Steps

1. **Prepare** Text;
2. **Log in** to [TAPoR](#);
3. **Generate** a word list (sorted by frequency) using the [TAPoR List Words Tool](#);
4. **Save** the results to the *Databench* ;
5. **Perform** a wildcard search for *ism, and other suffixes suggestive of theory  in the frequency list;
6. **Explore** the words found individually using [Find Words - Concordance Tool](#) to understand their context;
7. **Repeat** this for all found words;
8. **Use** a synonym finding tool such as [WordNet](#) to compile a list of words referring to opposing concepts to those previously found;
9. **Look for** contrary theoretical references using [Find Words - Concordance Tool](#) for the antonymic references.

Exercise Steps

1. Login into [TAPoR](#).
2. Run the [TAPoR Googlizer](#) collect some web pages related to your topic. In this case we input the search term *Coffee* and leave the other parameters as default.

3. When the search results are returned, choose to save them to the *Databench* with a title such as “Coffee Results”;
4. Your results should resemble:

7. Note that the list refers to coffee itself, the tools used to both harvest and consume coffee and as exploration continues, you may want to re-do Googlizer for a more precise search term.

Glossary

Databench

The *Databench* is a temporary workspace where you can store your text analysis results in the TAPoR for further use.

Googlizer

The *Googlizer* queries the Google search engine using a word or phrase you provide and returns the results of the Google search.
