

Aggregate Information from the Web To Explore a Particular Concept

This recipe uses the Googlizer, frequency lists, concordances and collocation to efficiently explore information from the web for a particular topic.

Ingredients

- A topic in which you are interested
- A Thesaurus Tool such as [Eva at POETS](#)
- An Aggregation Tool such as the [TAPoR Googlizer](#)
- A Collocation tool such as the [TAPoR Find Collocates Tool](#)
- A Concordance tool such as the [TAPoR Find Words - Concordance Tool](#)
- A List Words tool such as the [TAPoR List Words Tool](#)

Recipe Steps

1. **Identify** your topic;
2. Use a thesaurus tool such as [Eva at POETS](#) to **find related words** that may help to identify your topic;
3. **Login** to the [TAPoR portal](#); ;
4. **Input** topic keywords into the [TAPoR Googlizer](#) to get a list of URLs and associated HTML ;
5. **Compile** the results into an Aggregated text;
6. **Generate** a frequency list from the aggregated text using the [TAPoR List Words Tool](#) to find interesting words for further exploration;
7. **Choose** some interesting words from the resulting list;
8. **Use** those words one at a time in [Find Collocates Tool](#) to explore words that appear together;
9. **Choose** some interesting combinations of words from the resulting lists;
10. Use [Find Words - Concordance Tool](#) to find them in the aggregated text file or Google them as phrases in quotation marks.

Discussion

Why Login

When using an aggregation tool such as the Googlizer, you must be able to save text to the Databench as part of the process. To make this possible you must be logged into the system to maintain your own personal workspace. If you require access to [TAPoR](#) please visit [the TAPoR signup page](#).

Exercise Steps

Glossary

Googlizer

The *Googlizer* queries the Google search engine using a word or phrase you provide and returns the results of the Google search.
